[^0]:    Note 1: The value of the positional repeatability is at the tool center point (TCP) compliant to ISO 9283.
    Note 2: The value in the parentheses indicates the wall-hung condition. J2 axis may occur the limitation of the working range.
    Note 3: There are occasions where restrictions can be made to the operation range of the J 2 axis when the wall-hung condition.
    Note 4: The operation range of the J 3 axis is restricted to -170 degrees to +180 degrees when floor based welding is applied (In overhead mounting it's a combination of $\mathrm{J} 2+\mathrm{J} 3$ axis).
    Note 5: This is the specification for the case that the coaxial power cable are let into the centrum of J 4 and J 6 axis. The value given in parentheses presents for other specifications. Note 6: There are occasions where restrictions can be made to the operation range of the J 6 axis, depending on the J 5 axis's posture.
    Note 7: Max. Load to the upper shoulder, when loading the max. payload capacity at the end effector.
